

Project data

Prokaryotic genome fasta files and ptt tables (gene information files) + papers about lateral gene transfer in prokaryotes

Tha Bac_genomes.zip files contains 10 different prokaryotic genome sequences and the gene information tables (ptt).

Genome DNA sequences are stored in a fasta formatted file named by the NCBI accession NR e.g. (NC_011138.fna).

The corresponding gene information table is stored in a file with same accession NR and the suffix .ptt.

Included bacteria are:

*Alteromonas_macleodii*_Deep_ecotype__uid58251

*Archaeoglobus_fulgidus*_DSM_4304_uid57717

*Bacillus_anthraxis*_Ames_uid57909

*Cyanothece_PCC_7424*_uid59025

*Flavobacterium_psychrophilum*_JIP02_86_uid61627

*Methanosarcina_mazei*_Tuc01_uid190185

*Mycobacterium_leprae*_Br4923_uid59293

*Prochlorococcus_marinus*_MIT_9301_uid58437

*Pseudoalteromonas_atlantica*_T6c_uid58283

*Sulfolobus_solfataricus*_98_2_uid167998
