

OMERO web link

Step-by-step guide: How can I retrieve a **web link** that directs to my OMERO project?

1. Choose the Project, Dataset or Image file for which you would like to retrieve a web link.
2. Left-click on the "Link to this..."-icon will open a small window with the requested web link.
3. User Strg+C or right-click+copy to copy the link.

The object IDs within OMERO are never changing. Therefore renaming does **not** affect the IDs and the generated web links are **permanent**.
